

Wire and Cloud Temple Announce Partnership to Strengthen European Digital Sovereignty

June 04th, 2025

Paris, France / Berlin, Germany

Cloud Temple, a leader in secure cloud infrastructure, and Wire, the trusted provider of secure messaging and collaboration solutions, are pleased to announce a strategic partnership. Together, the two European technology champions aim to deliver an end-to-end secure communication and collaboration platform, exclusively hosted and operated in Europe, fully aligned with the continent's sovereignty and cybersecurity ambitions.

Wire's secure messaging and collaboration platform, trusted by over 1,800 organizations and certified by Germany's BSI, will be hosted on Cloud Temple's cloud infrastructure, which is certified by France's national cybersecurity agency (ANSSI). Together, they ensure the highest security standards through industry-leading certifications. The combination will offer organizations, particularly in the public sector, regulated industries, and critical national infrastructure, a seamless, compliant, and fully sovereign European solution.

Designed with interoperability at its core, the joint solution addresses the needs of institutions operating under strict security requirements, including those subjects to DORA and NIS2 regulations. This partnership reflects the growing momentum for European companies to unite and deliver alternatives to non-European hyperscalers, ensuring independence without compromising innovation or efficiency.

Christophe Lesur, CEO of Cloud Temple, commented:

"At Cloud Temple, we are committed to building the foundations of a secure and sovereign European digital ecosystem. This partnership with Wire is a natural extension of our mission: combining forces with trusted European players to deliver end-to-end solutions that meet the highest standards of security, interoperability, and compliance."

Benjamin Schilz, CEO of Wire, added:

"Europe needs its own strong, trusted infrastructure for secure communication and it must be built by European companies. By joining forces with Cloud Temple, we are creating a truly sovereign solution that empowers public and private sector organizations to communicate and collaborate securely, under European values and laws."

The partnership comes at a critical time when organizations across Europe are seeking trusted digital solutions that comply with the strictest standards, while avoiding dependency on non-European technologies. The Wire and Cloud Temple joint offering empowers institutions to focus on their missions with confidence, knowing that their communications and data are protected by European leaders in cloud and security.

Oliver Brown, VP of Commercial at Wire, commented: *"Across our conversations with customers and prospects, the message has been clear: there is an urgent need for a truly European, secure communication solution that meets the highest standards of compliance and sovereignty. This partnership directly responds to that demand. By combining Wire's secure collaboration platform with Cloud Temple's trusted cloud infrastructure, we are delivering exactly what the market has been asking for; a solution that organizations can rely on today and into the future."*

About Wire

Wire is the enterprise-class secure workspace platform, delivering a full suite of messaging, audio, video, and file sharing capabilities for use at scale by teams while staying protected by the industry's most stringent end-to-end encryption based on the MLS standard that is delightfully invisible to users and always on. Wire provides the enterprise-class alternative to collaboration suites offered by tech giants whose business models monetize their customers' sensitive data and leave dangerous security holes in their products by design. Wire erases the barrier between the productive collaboration that users want and the data protection, privacy, and compliance that organizations need. Wire is trusted by the world's most security-sensitive government and defense agencies, global enterprises, and millions of users around the world.

About Cloud Temple

Founded in 2017, Cloud Temple was born with the ambition of democratising the cloud within sensitive sectors, guaranteeing their security, without compromising innovation, in order to meet the transformation needs of Industry, Finance, Healthcare and the public sphere.

Driven by an approach of responsibility, Cloud Temple has rapidly established itself as a benchmark in Europe, offering solutions that meet the most demanding standards in terms of cybersecurity and data sovereignty. In response to the technological diversity of our customers, we have placed interoperability at the heart of our strategy, enabling our customers to accelerate their innovation projects.
