

Cloud Temple and Everience join forces to give European organisations control over their cloud and AI

The partnership combines Cloud Temple's sovereign cloud infrastructure with Everience's expertise in IT transformation and operations to address the needs of highly regulated and security-sensitive organisations. Together, they enable organisations to embrace cloud and AI while maintaining full sovereignty over their data.

Milan, October 2026 — Everience Italia, a digital transformation specialist, and Cloud Temple, the French trusted cloud and AI provider, today announce a new partnership. Together, they will help European businesses and public organisations adopt cloud and AI, while keeping control, compliance, business continuity and technology choice at the heart of their infrastructure strategy.

Security, compliance, continuity: the new criteria for choosing a cloud

Choosing a cloud is no longer only about performance and scalability. As AI moves into production, several other questions now weigh as much: where data is stored, who can access it, whether regulations are met, and whether critical services keep running.

The Everience × Cloud Temple partnership addresses this shift. Cloud Temple provides sovereign cloud infrastructure and services, while Everience supports organisations with architecture definition, migration and the ongoing operation of IT and cloud environments.

The joint proposition is built around three complementary dimensions:

- **Cloud Infrastructure:** *providing access to a comprehensive portfolio of innovative cloud services, from data platforms to on-demand compute and storage, while meeting the highest standards of security, compliance and sovereignty.*

- **Managed Services:** leveraging Everience's expertise to support the migration, administration and day-to-day operations of business-critical IT environments, ensuring reliability, resilience and operational excellence.
- **AI:** providing infrastructure capabilities and services to develop AI use cases while maintaining greater control over data, technology environments and model consumption.

The offering is aimed at sectors where security and service continuity are non-negotiable: the public sector, finance and insurance, healthcare, energy and industry.

«Technological dependency is the quietest form of leverage. When your data, models and critical systems run under someone else's legal and operational control, you have already conceded part of your autonomy. With Cloud Temple, we reverse that: we give organizations the infrastructure and operational capacity to develop and run AI while keeping full agency over their information environment and decision-making.» said Andrea Rota, GM of Everience Italia.

Control without compromise

For Cloud Temple and Everience, sovereignty does not mean technological isolation. It means full control. Organisations must be able to decide where their applications and data run, who operates them and which rules apply, with no exposure to non-European laws or providers. With the rise of AI, that control now extends to technology environments and to the models themselves. To support the partnership in Italy, Cloud Temple is pursuing QC qualification from ACN, the Italian cloud security standard, which it expects to obtain in 2027.

" Europe does not have to choose between innovation and sovereignty. Our ambition with Everience is to give companies full control: knowing where their data is, who operates it and under which laws, without giving up what cloud and AI make possible," said Sébastien Lescop, CEO of Cloud Temple.

The partnership is now part of Everience's cloud and managed services portfolio. It uses a modular approach, from architecture assessment and migration through to ongoing operations.

About Everience

Everience Italia is part of Everience, an international group specialising in AI-augmented digital services, which belongs to Neurones, a leading European IT services group listed on the Paris Stock Exchange. With over 4,000 professionals and 18 locations worldwide, Everience provides expertise in cloud and infrastructure, managed services, cybersecurity, artificial intelligence and digital transformation.

Everience Italia is ISO 9001 certified, reflecting its commitment to quality and operational excellence. Combining international capabilities with local expertise, the Group supports organisations in building secure, resilient and future-ready IT environments.

About Cloud Temple

Cloud Temple builds the trusted cloud for sensitive sectors: healthcare, finance, industry and the public sector. Founded in 2017, the company holds SecNumCloud and PAMS qualifications from ANSSI, the French national cybersecurity agency. It is ISO 27001 and HDS (Health Data Hosting) certified, and holds C5 attestation in Germany. It is also pursuing QC qualification from ACN in Italy, expected in 2027. All data is hosted in Europe, in certified data centres with a controlled carbon footprint.
